CNR-Skins

CNR-Skins extends CNR-Sim Pro with a set of prebuilt, fully interactive, graphical radio faceplates ("skins") for more realistic operator training. All "skins" are pre-programmed for use with CNR-Sim Pro, ready for immediate use.

Calytrix has modeled a number of radio panels to provide realistic, interactive controls and displays as an alternative to CNR-Sim's standard on-screen GUI. Knobs and switches operate just as they do on the real radios. Output displays look like the real radios' displays. Currently, CNR-Skins includes the following radios:

- SINCGARS RT-1523

- PRC-148 (MBITR)

- PRC-152

- PRC-117F

- PRC-117G

Network and Communications Manager (Canberra) - Immediate Start

ISO9001:2008

Certificate No.: AS/NZ-028

All purchasers of CNR-Skins receive all currently available radio skins, and upgrades to CNR-Skins will include any new radio faceplates modeled since the time of the previous software release.

Each CNR-Skins license includes the necessary CNR-Sim Pro license.

For customers who want a different radio faceplate than those bundled with CNR-Skins, Calytrix offers to model that faceplate for a very low, fixed, price. Contact Calytrix for details.
