CNR-Touch

CNR-Touch lets its user instantiate and control multiple CNR-Sim Pro radios with rapid "one-touch" operations. CNR-Touch is so named because it's most often used with a touchscreen, but it can be operated by the computer's mouse, if desired. In many situations where CNR-Sim provides the radio comms part of a larger training system, users want a single controller for multiple radios. CNR-Touch meets that need. As examples, soldiers on patrol often have access to more than one radio, and convoy vehicles, ships, and aircraft contain many radios.

CNR-Touch running on a Mimo screen attached to a VBS2 laptop

CNR-Touch's basic features:

- Controls up to 5 CNR-Sim Pro radios (on the same computer where CNR-Touch runs)
- Each CNR-Sim Pro radio supports an unlimited number of comm Channels
- Instant volume changes, per Channel, to Low, Medium, and High volume settings
- Instant "one-touch" adjustment of Overall Volume Level
- One-touch routing of Channels to the Left Ear and Right Ear
- PTT, VOX, and MUTE controls
